

INTRODUCING THE NURAJACK SAFETY GRID

The greatest risk to a floated tile or paver deck is if a tile was to break. The Nurajack Safety Grid offers a revolutionary approach to raised floated decking, providing unparalleled safety, flexibility, durability and ease of installation. This innovative system is perfect for large podium areas, public spaces, rooftop bars and even stylish backyards. It allows for the seamless integration of various flooring materials, such as pavers of different sizes and artificial turf, without sacrificing aesthetic appeal or waterproofing integrity.

KEY BENEFITS OF THE NURAJACK SAFETY GRID:

Freedom of Choice:

The Nurajack Safety Grid grants complete freedom in flooring selection. You can mix and match different materials, patterns and sizes to create a truly personalised space.

Dry Installation:

The Nurajack Safety Grid typically is a dry installation process, ensuring raised and removeable access to membranes and a clean and environmentally friendly installation.

Adhesive Installation:

To ensure a firm and resilient surface, an adhesive system is available. The adhesive option may allow for wind-proof, vandal-proof or non-structural paver applications (testing recommended).

Level Surface:

Due to the self-levelling heads of the Nurajacks, the system guarantees a perfectly level surface while still protecting membranes from point loading.

Excellent Drainage:

Like all Nurajack systems, it features drainage below the trafficable surface, ensuring a completely level surface and eliminating potential trip hazards.

Versatility:

Compatible with a wide range of subfloors, including waterproof membrane systems, it is ideal for both residential and commercial applications.

Low-Maintenance:

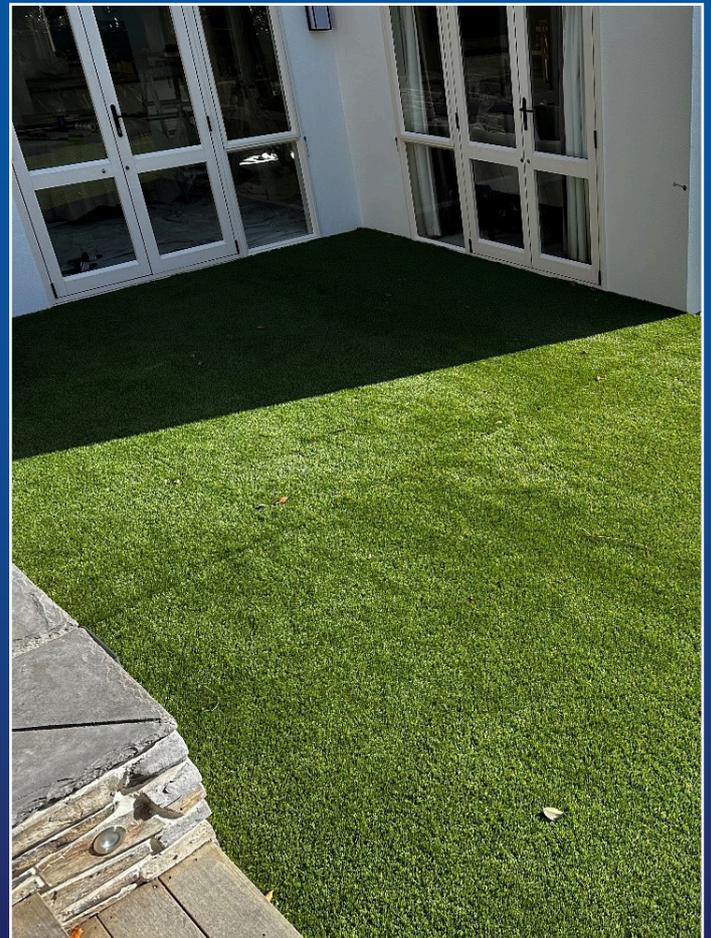

Once installed, the Nurajack Safety Grid requires minimal to no maintenance.

Sustainability:

All components of the Nurajack systems are made from a high percentage of post-consumer recycled materials and are recyclable, aligning with sustainable building practices. Nurajack is part of Nuralite Waterproofing group of companies and has a target of zero carbon emissions.

Wide Range of Accessories:

With a variety of accessories available, including vertical closures and perimeter spacers, the system can be installed in a wide variety of scenarios.

WHY CHOOSE THE NURAJACK SAFETY GRID?

Safety:

The Nurajack Safety Grid provides enhanced safety, especially in raised flooring applications where a broken paver will cause significant damage or disruption (public spaces, emergency egress etc.)

Flexibility:

The Nurajack Safety Grid offers unparalleled flexibility in paver design, selection and installation. Turf is easily installed to create dynamic outdoor spaces.

Stability:

The finished flooring is exceptionally stable, providing a secure and durable surface.

Drainage:

The system's drainage capabilities ensure a dry and healthy environment.

Resilience:

The Nurajack Safety Grid is designed to withstand heavy loads and maintain its structural integrity over time.

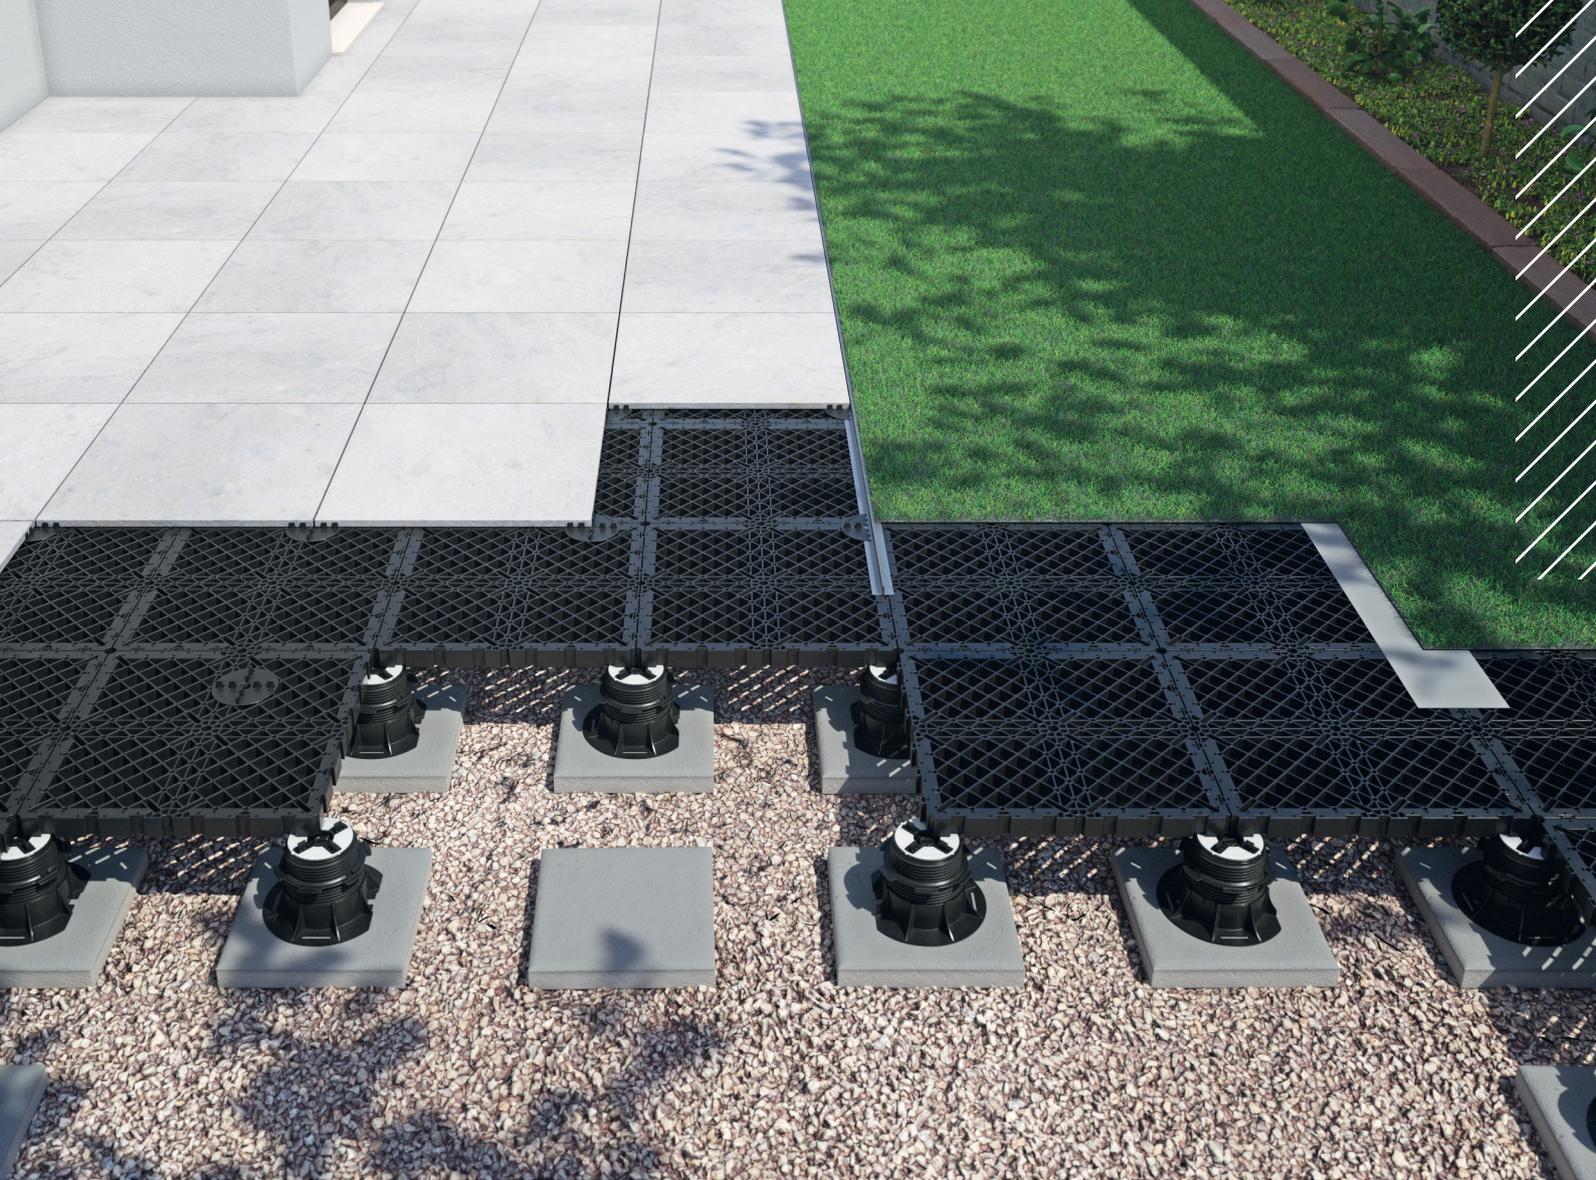

Sustainability:

By using recyclable components and avoiding harmful chemicals, the Nurajack Safety Grid promotes environmental responsibility.

Ease of Installation:

The system is quick and easy to install, saving time and labour costs.

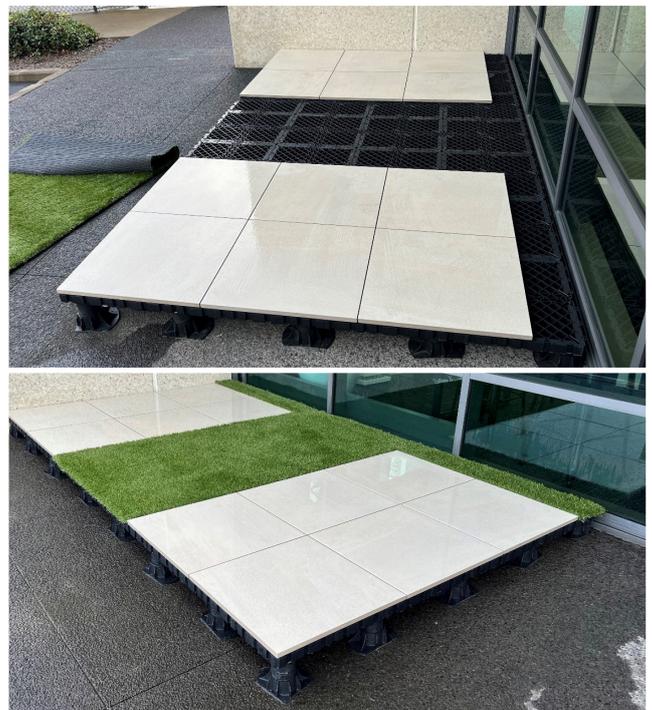

INSTALLATION PROCESS:

The Nurajack Safety Grid installation is a straightforward process that can be completed in four simple steps:

1. **Place Nurajacks:** Position the Nurajacks on the desired surface and adjust them to the required height.
2. **Install Safety Grid Panels:** Connect the Nurajack Safety Grid panels together using the dovetail joints, ensuring a stable and level surface.
3. **Adjust and Level:** Use the Nurajack Adjustment Key to fine-tune the levelling of the Nurajack Safety Grid panels.
4. **Lay Flooring:** Install your chosen flooring elements, utilising the Nurajack Mini Spacer and Nurajack/Nurapad Shim for precise alignment.
